ANSWERS-DO NOT COPY

Shared Reading- What a plant needs to grow 22/2/21

	<p>What is germination? Germination is when the seed starts to sprout.</p>
	<p>Find and copy the word that means the same as the adjective 'delicate'. fragile</p>
	<p>What will happen if a plant is not watered enough? If a plant is not watered enough its stem will be fragile and it will have very dry leaves.</p>
	<p>What do you think would happen if you planted a seed and put it in a dark, cold cupboard? In a dark cold cupboard the plant will be tall and flimsy as it tries to search for light or it may not germinate as it won't be warm enough.</p>
	<p>Where would be the best place to grow a healthy plant? I think the best place to grow a healthy plant would be on a sunny, warm windowsill.</p>

What Plants Need to Grow

To grow properly, a plant needs:

- air;
- light;
- water;
- nutrients;
- warmth.

Why does it need them?

- If a seed is not warm enough, it will not germinate. Germination is when the seed starts to sprout.
- If a plant does not have enough light, it will grow to be tall and flimsy as it tries to search for light. The plant will probably die.
- If a plant is not watered enough, its stem will be fragile and it will have very dry leaves. Again, it will probably not survive.

So, where is the best place to grow a healthy plant?
