

Super Seeds

Most plants begin their lives as seeds. Even giant trees grow from tiny seeds. This leaves lots of people wanting to know how!

Inside each seed is a mini plant. It is protected by a hard shell called a seed coat. Inside the seed coat, there is food for the plant to use. This mini plant can become a fully-grown plant if it has all the things that it needs. It waits until it has the right levels of water, oxygen, light and heat. When it does, the mini seed begins to grow quickly. This is called germination.
